

AMENDMENTS TO THE CLAIMS:

Amend the claims as follows:

1. (Currently Amended) A process for preparing 3,4-dialkoxythiophene of the following chemical formula [2],

Chemical Formula [2]

which consists of decarboxylating

a parent 3,4-alkylenedioxy-2,5-thiophenedicarboxylic acid of the following chemical formula [4],

Chemical Formula [4]

wherein X represents an optionally substituted $-(CH_2)_n-$, where n is an integer from 1 to 9, in a water-miscible polar solvent that has a boiling point lower than 225°C in

the presence of copper catalyst under an oxygen atmosphere by removing solvent by washing with water and isolation of the product by simple vacuum distillation.

2. (Original) A process according to claim 1, wherein the oxygen atmosphere is either air or pure oxygen gas.

3. (Original) A process according to claim 1, wherein the water-miscible polar solvent is a solvent or solvent mixture of two or more solvents selected from a group consisting of sulfoxides, alcohols and amides.

4. (Previously Presented) A process according to claim 1, wherein the solvent is a solvent or solvent mixture of two or more solvents selected from a group consisting of dimethylsulfoxide, N,N-dimethylformamide and ethylene glycol.

5. (Currently Amended) A process according to claim [[4]]1, wherein the copper catalyst is a catalyst selected from a group consisting of copper powder and copper [[salts]]salt, or a mixture of copper powder and copper salt.

6. (Original) A process according to claim 5, wherein the copper salt is selected from a group consisting of basic cuprous (cupric) carbonate, cuprous (cupric) sulfate, cuprous (cupric) oxide and cuprous (cupric) hydroxide.

7. (Previously Presented) A process according to claim 1, wherein the decarboxylation is performed at a temperature from 100 to 170°C.

8. (Original) A process according to claim 7, wherein the decarboxylation is performed at a temperature from 120 to 140°C.

9. (Previously Presented) A process as in claim 1, the 3,4-dialkoxythiophene is 3,4-dimethoxythiophene.
